
Legend:

- ○ System state (computer - user)
- □ Note to the state
- 🟡 In this state, the security of the scenario is undefined
- 🟢 In this state the scenario is secure (for all subsequent states
- 🔴 In this state the scenario is insecure (for all subsequent stats)
- 🟣 This scenario is considered in our work
- ↓ Transition between states
- ↕ Transition between states (The order of states does not lead to changes in the system)
- ↓ Transition between states (The number of transitions may vary and does not affect the final result (system security))
- ⋮ Connection between note and state
